

NOTIFY at work.

Spectralink solutions create peaceful, efficient environments to improve patient care and are always delivered the way you want them with crystal clear voice, direct access to mobile workers, durable and dependable handsets, and interoperability that enables ease of use for both the user and the installer.

Wherever you are—critical information at your fingertips.

As a mobile healthcare worker, finding balance is important. From tending to patient needs to checking on a patient's status or receiving test results, juggling can be difficult. But what if you didn't have to choose between caring for a patient and checking whether labs were ready? What if a critical patient alert could find you, and not the other way around? With Spectralink NOTIFY, alerts and alarms are delivered directly to your Spectralink handset so you can concentrate on providing the best patient care possible and, at the same time, have the confidence that important information gets to you—wherever you are in the building.

Available on DECT and Wi-Fi devices, Spectralink NOTIFY integrates into your existing wireless infrastructure to tie together the Spectralink handsets with leading middleware vendors and patient monitoring applications. This integration allows caregivers to make immediate, yet informed, decisions and quickly consult with experts from a wireless handset anywhere in the building. This solution even allows alarm prioritization to help caregivers reduce footsteps, manage alarm fatigue and prioritize responses.

How Spectralink NOTIFY expedites response:

Informed Mobility

Provide caregivers a constant connection to critical patient information, from any in-building location, to save time and unnecessary steps

Seamless Integration

Assure interoperability with patient monitoring systems and middleware, to deliver critical alerts to caregivers' mobile Spectralink handsets

Maintain Activity Log and Monitor Service Quality

Record and archive data to create a holistic view of your teams' service quality. Quickly accept or escalate issues with a single touch of a button to ensure best practices

Promote Peaceful Healing Environment

Replace disruptive overhead pages with unobtrusive mobile alerts

Let the experts from Spectralink help

Whether you lack time or resources, or the skill set and experience to plan, install, configure and validate the successful implementation of Spectralink NOTIFY, our Professional Services team is here to help. Rely on us to design and deliver the highest quality network to help you protect your workers.

Spectralink, a global leader in wireless solutions, solves the everyday problems of mobile workers through technology, innovation and integration that enable them to do their jobs better.

With Spectralink wireless telephony, on-site employees that need on-the-go flexibility can roam freely throughout the workplace without sacrificing voice and data coverage or clarity. Our wide range of products allows people like you to easily connect whenever and wherever your day takes you. And because our workplace wireless systems integrate with existing systems effortlessly, nurse efficiency and patient satisfaction increase to new levels.
