

SAFE at work.

Your staff takes care of business.
We take care of them.

Staff safety is always a priority, especially for mobile workers dealing with the public, or handling money. Whether in healthcare, retail, manufacturing—your staff may find itself in unpredictable situations, often alone. With Spectralink SAFE, you can be ensured the help they need is available any time of day, or night.

Available on select models of our DECT and Wi-Fi phones, Spectralink SAFE integrates into existing mobile communications infrastructure to detect situations where a worker may be in danger or need assistance. On the go, unable to move, or even incapacitated—Spectralink SAFE enables lone, mobile workers to quickly summon help, and offers security.

How Spectralink SAFE can help:

Duress/Panic Button

If invoked, an automatic alarm call is triggered and notification is sent to a monitoring application

Tear-off String

If the tear-off string is detached from handset, an automatic alarm call is triggered

"Running" Notification

If the handset detects a user is running to an emergency or from a risky situation an alarm is triggered

Tilt Notification

If the handset is tilted from its usual position due to an emergency, a notification will be triggered

"No Movement" Notification

If the handset remains stationary, an alarm will indicate the user is no longer moving and an incident has occurred

Let the experts from Spectralink help

Whether you lack time or resources, or the skill set and experience to plan, install, configure and validate the successful implementation of Spectralink SAFE, our Professional Services team is here to help. Rely on us to design and deliver the highest quality network to help you protect your workers.
